

PRE-ASSEMBLED CONNECTORS HELP ANIMAL FEED TRAILER MANUFACTURER GET TO WORK

CANFIELD CONNECTOR'S CUSTOM DEUTSCH TO M12 CONNECTOR SOLUTIONS SAVE TEAMS TIME

GatorMate GT Series

A Midwest manufacturer of aluminum feed trailer and feed body transportation equipment, with 40 years of experience and an industry leader for design innovation and quality, turned to Canfield Connector with a need for pre-assembled Deutsch-to-M12 connectors as a win for its mobile hydraulics systems.

CHALLENGE

Hydraulics control the feed section separator gates, spinning auger for emptying, and opening lid for loading the client's trailer. However, assembling connectors used in these systems burdened its team with a tedious, time-consuming task.

SOLUTION

Canfield Connector's GatorMate 2-pin and 3-pin GT Series of rugged, all-in-one molded connectors plug in to the client's systems right out of the box without any additional crimping tools or installation typically required with other models.

RESULTS

Canfield Connector's solution allows the manufacturer's employees to focus their efforts on more important work. The customer also benefited from Canfield's excellent customer service and ability to quickly deliver American-made products.
