One per distributor location

- Plug and play
- Intuitive touch screen
- Excellent sales training tool
- Self-contained rugged case
- Battery powered

The EiS & EtS Demo Box gives distributors a high quality selling tool to demonstrate to their customers how the Inclinometer Sensor / Tilt Switch function. This in turn not only helps our distributors sell our product but also helps our distributors understand how these complex sensors work. Featuring an EiS and EtS with connection hookups for M12 Circular Connectors.

The Demo Box's main function is to display a graphical representation as to the conditions the Inclinometer Sensor / Tilt Switch are experiencing.

Don't worry about batteries as the Demo Box is sold as a rechargeable unit and can be charged at any time with a standard Micro-USB Cord, such as the common connection found on most cell phones.
